

## ALL NATURAL GRUB PREVENTION & CONTROL SERVICES

Through the utilization of Pureganix TerraCure G, an organic biological grub preventive and curative treatment, we can effectively control and eliminate grubs from your lawn. Pureganix TerraCure G controls lawn grubs with a success rate equivalent to similar grub control products but without the use of harsh toxic chemicals. This helps to avoid any side effects that may impact other insects such as pollinators. We generally suggest that grub control be utilized as a part of our whole organic lawn care program for optimal results.

### APPROVED AREAS OF APPLICATION

- Residential lawns
- Daycare facilities
- Golf courses (e.g. greens, tees, collars, roughs, and fairways)
- Commercial grounds (e.g. office, shopping complexes and airports)
- Parks
- Schools
- Playgrounds
- Athletic fields
- Pet care facilities
- Cemeteries
- Sod farms
- Other turf grass-covered areas

### OUR RECOMMENDED PROGRAM

The best time to have a treatment performed is in late June through August. Pureganix TerraCure G not only removes the damaging grub larvae from your lawn but also acts as a deterrent to future grub populations.

We apply Pureganix TerraCure G when target insects are present. For optimum annual grub control, we apply Pureganix TerraCure G from peak adult flight through the peak egg hatch of the primary insect species being targeted. Success is normally seen through one application of Pureganix TerraCure G and many homeowners use Pureganix TerraCure G as a preventive measure, even if there is no grub damage apparent. We generally suggest starting with a minimum of two applications per season and can revisit once results are analyzed.

### OUR APPLICATION METHODS

A Pure Solutions Field Specialist will apply the product to your entire lawn area so the treatment works as both a preventative and curative. These treatments can be applied from late spring through October! For best results, this treatment needs to be watered within a few days of the application.

Our all-natural grub control product will remain in the root zone and will eliminate any white grubs that hatch and feed on your turf's roots. This results in a green, beautiful, grub free lawn without the use of toxic chemicals.

### DETERMINING THE PRICE FOR YOUR PROPERTY

Using our online mapping software (or by meeting with you at your property), we determine the price per application based on the treatable property size. Grub control is usually part of our overall organic lawn care program but can be broken out into treatments that usually take place 2-3 times a season.

If you notice large brown dead areas on your lawn or see signs that your lawn may have been dug up by an animal, then you may have a grub problem. At Pure Solutions we have over a decade of experience in dealing with grubs in an effective, natural and safer way, giving you a peace of mind that you are not exposing yourself, friends, family or pets to harmful toxic chemicals.
