

PROGAEA™ TMPRO

PROGAEA™ TMPPro is an exclusive tick and mosquito control product developed specifically for Pure Solutions. PROGAEA™ TMPPro eliminates ticks and mosquitoes on contact while providing residual control for weeks after treatment. The proprietary combination of essential oils and other ingredients control ticks and mosquitoes fast through neurological disruption, dehydration, and suffocation. PROGAEA™ TMPPro's all natural ingredients make it a 25 (b) and USDA Bio Preferred product that is safer for your family, community, and environment.

OUR RECOMMENDED PROGRAM

To achieve the best results on most properties, we recommend a 21-day routine program scheduled for the active season. The active season length is weather dependent and can vary from year to year. In New England, ticks are typically active from March through December. Mosquitoes have a shorter season from April through October. It is never too late to start controlling these vectors, and you can customize the start and end of your program based on your needs.

OUR APPLICATION METHODS

We use backpack sprayers to apply PROGAEA™ TMPPro Tick and Mosquito on all open areas of the lawn and along the perimeter of the property. Our application methods change slightly throughout the season based on the behavior of the pests. To target ticks, we focus our spray close to the ground, along the perimeter of the property and around stone walls and heavily leaf littered areas. To control mosquitoes, we focus on the trees, shrubs and shaded areas of the property.

DETERMINING THE PRICE FOR YOUR PROPERTY

Using our online mapping software or by meeting with you at your property, we determine the price per application based on the treatable property size. This includes the lawn, the perimeter of the property, and about 20-30 feet into any wooded areas. Because our season length is variable, we do not price based on number of treatments, but instead on the overall product usage we will use throughout the season. Our clients are billed after each treatment.

TICK SEASON

Active in the early spring through the late fall as long as temperatures are above freezing. Early spring and late fall treatments are key.

MOSQUITO SEASON

Active when temperatures are above 50 degrees on average. Early fall is when mosquito-borne diseases are most often transmitted.

Pure Solutions' routine tick and mosquito control program kills ticks and mosquitoes on contact in all life-stages without the use of harmful chemicals. Our exclusive product, PROGAEA™ TMPPro Tick and Mosquito, is EPA FIFRA 25(b) exempt which makes it safer to be applied around children, pets and delicate plan-life. Through a consistent, routine program, we build a residual barrier on the property and control the pests throughout the season.
